

## BOGDAN BRUKNER

(1931-2006)

On a frosty January morning, terrible news saddened the European scientific community, and deeply grieved all friends: Professor Bogdan Brukner's generous heart had stopped beating.

He passed away shortly before his 75<sup>th</sup> birthday, leaving an empty space that will be impossible to fill. His demise will inevitably affect a number of vast research projects that we started together, the most important of these being the one dedicated to the Prehistory of Banat. Professor Bogdan Brukner's qualities were almost unanimously appreciated by the members of the archaeological profession. What we especially admired in him was the strength of his moral principles, his outstanding professionalism, his vast specialist knowledge, and, last but not least, his solid general knowledge. An exceptional human being, Professor Bogdan Brukner overwhelmed us all with his great generosity which could only arise from a truly noble and distinguished spirit. He was always ready to give good advice, to spur you on, to provide encouragement or support. He gladly shared his rich professional experience with younger colleagues, and, through the friendliness and joviality that he radiated, he made all differences of age and academic or scientific status between himself and his interlocutor disappear.

Professor Bogdan Brukner was born on 13 May 1931 in Zagreb. He attended primary and grammar school in Belgrade where he also studied and graduated from the Faculty of Philosophy, Department of Archeology in 1954. He received his PhD in 1965 with a dissertation entitled *The Neolithic in Vojvodina*. Between 1960 and 1968 he worked as a curator at the Museum of Vojvodina in Novi Sad. After the foundation of the Institute for the study of Vojvodina history in 1968, he was elected a scientific assistant and in the same year he started teaching archaeology as an assistant professor at the Faculty of Philosophy in Novi Sad. In 1972 he was elected a higher scientific assistant at the Institute of History, in 1973 became an associate and in 1984 a full professor at the Faculty of Philosophy in Novi Sad.

A scholarship he received from the Humboldt Foundation enabled him to stay in Germany during 1971 and 1972, working on "Pannonia and Central Europe in the Neolithic". Part of this research was published in Munich in *Die illustrierte Weltgeschichte der Archäologie* (1979).

Between December 1979 and February 1980 he delivered several lectures on problems of the Neolithic and Eneolithic at the Anthropology Department of Berkeley University in the USA and later in New York, in Los Angeles, as well as in Frankfurt a/M, Köln, Munich, Münster, Basel, Zürich, Bern, Groningen, Krakow, Poznań and many others.

As a scientist, he conducted research in the field of prehistoric archeology and especially the early agricultural and cattle breeding communities of the Pannonian and Balkan regions. The greatest part of his research focused on the early and late Neolithic period in the Balkan and Central European regions.

He was a member of a number of archaeological committees in the country and abroad and was an active participant in many projects, congresses, symposiums and round table meetings, some of which he organized himself.

In 1984 he was elected a corresponding and in 1992 a full member of the Vojvodinian Academy of Sciences and Arts which later became the Branch of the Serbian Academy of Sciences and Arts in Novi Sad.

As friends, we shall sorely miss his bracing optimism which gave us all the confidence we needed in order to pursue our research goals.
